SAURABH KUMAR

GenAI / Machine Learning Engineer | LLMs, RAG, Computer Vision
+91 7983165036 | saurabhkumar9901@gmail.com | github.com/saurabhkumar9901 |
linkedin.com/in/saurabh-kumar-11june

TECHNICAL SKILLS

Languages & Frameworks: Python, PyTorch, Tensorflow, TypeScript/JavaScript, FastAPI, Flask, Django, React.js, Next.js and Node.js

AI / ML: LLM fine-tuning, RAG pipelines, LangChain, HuggingFace Transformers, Gemini API, DETR, GANs, Reinforcement Learning, Computer Vision (OpenCV), Prompt Engineering and Structured Output (Pydantic)

Data, Automation & Cloud: Scrapy, Selenium, Celery, Redis, FFmpeg, Pinecone, AWS (ECS Fargate, ALB), Google Cloud, Azure, Docker, Kubernetes and Git

Integrations & Tools: Razorpay (payments), Firebase (auth) and PostgreSQL

WORK EXPERIENCE

AI Developer — EnxtAI **Oct 2025 – Present**

- Build and ship responsive frontend applications with React.js, Next.js, Vue, Angular, Svelte, Tailwind, and Bootstrap, partnering with product and design teams to translate concepts into working features.
- Design backend APIs and data pipelines in Python and Node.js to support AI-driven workloads at scale.
- Architect and deploy backend and AI services on AWS and Google Cloud, improving reliability/uptime for production traffic.
- Implement retrieval-augmented generation (RAG) pipelines, tuning retrieval strategy to improve contextual accuracy and reduce response latency.
- Optimize system architecture for high-traffic, production-scale environments.

Backend AI Developer — Briqlabs **Mar 2025 – Sept 2025**

- Developed and maintained web applications using React.js, connecting frontend interfaces to AI-backed services via custom APIs.
- Built and enhanced retrieval-augmented generation (RAG) systems to improve model response accuracy and relevance.
- Deployed and hosted AI models and backend services across AWS, Azure, and Google Cloud.
- Designed scalable backend architecture to support growing AI workload demands.

PUBLICATIONS

"A Transparent Transformer Framework for English–Hindi Neural Machine Translation: Design and Preliminary Evaluation"

Mishra, Y., Singh, N., Rai, A.K., Kumar, S., Kumar, A. — ICTCS 2025 (Springer LNNS, vol. 1877, 2026) — doi.org/10.1007/978-3-032-19672-9_41

- Co-developed a from-scratch, interpretable Transformer (multi-head self-attention, sinusoidal positional encodings) for English–Hindi neural machine translation in PyTorch, trained on the cfilt/iitb corpus, achieving competitive BLEU scores against black-box pre-trained baselines.

PROJECTS

ENXO AI — Multimodal Meeting Intelligence & RAG Platform | Play Store ↗

Python (FastAPI, Flask), React, TypeScript, LangChain, Pinecone, Docker, AWS ECS

- Architected a containerized microservices platform (Web & Android via Capacitor) for audio transcription, speaker diarization, and meeting summarization.
- Engineered a multitenant RAG microservice using LangChain, Gemini embeddings, and Pinecone for secure, cross-meeting semantic search; built asynchronous audio pipelines with Celery, Redis, and FFmpeg on AWS ECS Fargate.

- Integrated Razorpay subscription billing and Firebase authentication into the platform.

SMC Unlisted Stox — Unlisted Securities Trading Platform | unlistedstox.com and Play Store ↗
TypeScript, Next.js (Turborepo monorepo), React, Android & iOS

- Built the Android and iOS trading apps end-to-end for a platform trading unlisted/pre-IPO securities, plus the marketing panel for listings and promotional content.
- Structured the codebase as a Turborepo monorepo with shared UI, ESLint, and TypeScript config packages, keeping the stack 100% TypeScript.

Green Vikalp — CRM Application | Web App ↗ and Employee App ↗
React, Next.js, TypeScript (web + mobile web), REST APIs

- Built a CRM application with separate web and mobile-optimized frontends for managing customer records, workflows, and team activity.

Mutual Funds OCR Fetcher | Live App ↗
Python, Scrapy, Selenium, DETR, Gemini 3.1 Flash Lite, LangChain, Pydantic, Docker

- Built a Scrapy + Selenium pipeline to crawl and extract mutual fund factsheet documents at scale.
- Used a DETR-based layout model with Gemini 3.1 Flash Lite to extract structured data from factsheets, enforcing schema validity via LangChain structured output with Pydantic.

EDUCATION

B.Tech, Computer Science (AI & Machine Learning) **Sep 2022 – Sep 2026**
Greater Noida Institute of Technology — Specialization in Artificial Intelligence and Machine Learning.

Senior Secondary (Class 12) **2017 – 2019**
Kendriya Vidyalaya No. 1, Air Force Station, Agra, UP — Physics, Chemistry, Mathematics, Biology — Aggregate: 70%

High School (Class 10) **2016 – 2017**
Kendriya Vidyalaya No. 3, Air Force Station, Makarpura, Gujarat — Aggregate: 91%
